

Does the University of Belize have a solar system?

The University of Belize has a solar photovoltaic (PV) system that supplies 0.1% of the country's electricity supply. Biomass supplies 8.9% of the country's needs, but demand currently exceeds supply of biomass. In 2014, the PUC issued a request for proposals for 60 MW of baseload generating capacity and 15 MW of solar or wind generating capacity.

Will Belize Electricity compensate you for excess solar energy?

The hope is that through regulations, Belize Electricity Ltd will have to compensate you for excess solar energy flowing to the grid during the day and off-set it against the electricity you are drawing from the grid at night; however, the reality today is the opposite.

What does SFE Solar do?

SFE Solar insures, maintains and repairs the entire system at no additional cost to you. What is a solar inverter? A solar inverter converts the direct current output of your solar panels into alternating current, which can be distributed through your home and fed into the electricity grid.

Where does the energy in Belize come from?

Almost half the energy in Belize comes from hydroelectric power and biomass. BEL purchases 71.5% of its electricity from five domestic independent power producers (IPPs) which produce much of the remaining energy--about 55.6%--of all the electrical needs of the country, and about 40% from a Mexican government-owned electric utility.

Why is Belize included in this energy Snapshot series?

Although not an island nation, Belize is included in this energy snapshot series because of the small diesel systems used to power its islands and the fact that it is a member of the Caribbean Community (CARICOM), an alliance of 15 Caribbean nations in the region.

Who is Sun's Electric?

Sun's Electric, with over 18 years experience offers design, installation, monitoring, maintenance, and repair of grid tied and off grid solar PV systems by a licensed electrician.
