

El uso de tecnologías IoT y AI en Smart Grids optimiza la distribución de energía. Más del 40% de la innovación en redes inteligentes ocurre en diez ciudades clave alrededor del mundo. ...

The rotary-type transformers -- in their largest application -- help control the intersection of two of the two largest electrical demand centers in the United States, the Pennsylvania-New Jersey-Maryland (PJM) transmission system and the New York City section of the NYISO grid, which are connected by an upgraded cable buried 60 feet below the ...

We have proposed building a Smart Energy Network across South Jersey. The network will include installing smart meters, also referred to as advanced metering infrastructure, and upgrading the local energy grid with specialized networking equipment.

Smart grid technology. Our smart grid solutions optimise energy distribution, improve grid resilience, and integrate renewable energy seamlessly into existing infrastructures, including ...

The largest solar PV array in Jersey, installed on the roofs at La Collette Power Station, is now live and generating power on to the grid, giving all Islanders a share of local ...

Por ejemplo, la inteligencia artificial. Uno de los beneficios que tienen los sistemas smart grids es que tiene una transmisión más eficiente de la energía, de la electricidad. Además, se puede ...

Bosses said the plans for the 2.7 hectare site, meant electricity would be returned to the grid in a process which would "increase Jersey's energy security" A solar farm in Jersey could power 17% ...

The largest solar PV array in Jersey, installed on the roofs at La Collette Power Station, is now live and generating power on to the grid, giving all Islanders a share of local renewables.

A smart home powered by low-carbon electricity combines comfort, control and convenience, helping you save energy and costs while also being good for the environment. Smart home technology enables you to connect heaters, speakers, lights, doorbells, security cameras, windows and other appliances to your home WiFi.

Por ejemplo, la inteligencia artificial. Uno de los beneficios que tienen los sistemas smart grids es que tiene una transmisión más eficiente de la energía, de la electricidad. Además, se puede integrar de manera más eficiente los sistemas en los que el propietario sea consumidor. También es un sistema más seguro.

More than 5000 Jersey homes could be solar-powered in the next six years. Jersey Electricity has launched its latest ambition towards clean energy. Currently, solar only accounts for less than 0.5% of the island's energy generation, but the JE Solar 5000 initiative hopes to boost this to 6.5% of the energy share by 2030.

The innovative Smart Solar bundle is available to customers who are switching their heating system from fossil fuel to electricity, securing further savings on their home energy running costs. Customers can use solar power in the home and heat their hot water through electricity harvested directly from their own roof.
