

"Thanks to the integration of the battery-storage system with a capacity of 2.6 MWh, 60% of the electricity supply now comes from solar energy. The island's grid quality was also improved once again.

Historically, French Polynesia has seen limited fluctuations in its low-carbon electricity generation. Between 2001 and 2019, hydropower generation remained relatively stable with minor changes, except for a slight increase of 0.1 TWh in 2010, followed by a ...

Solar PV: Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the classes (for comparison).
