smartEn, representing the Flexible Demand Management Industry, is the European business association integrating the consumer-driven solutions of the clean energy transition. We aim to create opportunities for every company, building and car ...

Our technology unites the automotive and energy industries. We integrate vehicle batteries into the power grid using intelligent charging and energy solutions. This way, we promote the development of renewable energies, stabilize the power grid, and make electric mobility more affordable.

In 2014, the Reliance SCADA/HMI system was implemented in Slovakia to monitor and remotely control power generation and consumption and to capture data from different producers of electrical energy. To optimize the generation and consumption of electrical energy, there are sources and appliances that can be controlled from remote locations ...

smartEn urges EU policy makers to take into account our recommendations in the definition and establishment of a digital technical framework and data spaces supporting demand-side flexibility and prosumer business models in order to increase system efficiency and reach climate neutrality in the most-cost effective way.

SEPS successfully connected to the international MARI platform on December 3, 2024. After the successful connection, SEPS has completed accession into international platforms focused on the procurement of balancing energy following its earlier integration into the PICASSO platform. The MARI platform provides connected transmission system operators ...

In 2014, the Reliance SCADA/HMI system was implemented for a customer in Slovakia to monitor and control gas consumption. In addition to a gas meter and a gas-volume conversion device, the customer site is equipped with a device that is intended for downloading and logging data to an external database.
