What is the difference between a microgrid and a smart grid?

A microgrid consists of LV distribution systems having wind, solar, etc or any combination as small DG units. A smart grid may or may not be a combination of microgrids. microgrids are developed to supply local small scaled loads. A smart grid can supply large loads with the help of communication and automation technologies

What is Microgrid technology?

Microgrid technology is a local energy source with a control capability, comprising Energy Distribution Resources (DER), which include management, storage, and loads. One of the advantages of a microgrid is that they can be connected or disconnected from the grid to operate autonomously.
