

SmartGridware®; Java IEC 61850 Data Logger Logging data from IEC 61850 Servers Product Overview. The SmartGridware®; IEC 61850 Data Logger is an IEC 61850 client application for receiving and logging data values from an IED. It is configured via XML and provides a simple command line for basic logging control.

IEC 61850 is a part of the International Electrotechnical Commission's (IEC) Technical Committee 57 (TC57) reference architecture for electric power systems. The model-driven approach of the TC57 standards, including IEC 61850, is an approach that requires a new way of thinking about substation automation that could result in very significant ...

LONDON, May 28, 2019 /PRNewswire/ -- As the use of IEC 61850 to provide protection, automation and control of substation equipment proliferates across global smart grids, new applications of the ...

According to IEC, the IEC 61850 standard is a core standard of the smart grid. In this context, IEC 61850 substations serve as crucial reference points for the entire smart grid system. The strength of IEC 61850 lies in its modelling capabilities, providing a future-proof aspect that extends beyond communication protocols.

IEC 61850 was launched in 2003 as a standard for digital substations and it is widely used in such applications. In principle, however, the Smart Grid is just a regionally distributed system of electrical substations, so IEC 61850 is also very relevant to the Smart Grid and, in fact, the IEC has designated it as one of the core smart grid standards.

Resumo--Este artigo apresenta uma análise de uma rede Smart Grid baseada na norma IEC 61850 e em dados obtidos a partir de medições de parâmetros de equipamentos utilizados na rede. O objetivo é explorar os limites operativos da rede, ie, determinar a latência e casos de congestionamento que afetem a confiabilidade da mesma, através de ...

As substation equipment becomes smarter, data will proliferate. This immense amount of data needs to integrate into a future grand scheme that incorporates IEC 61850 inside the station, IEC 61968 for the distribution system, IEC 61970 for the transmission system, IEC 60870-6 between control centers, all operating within the context of the cybersecurity standard ...

This paper presents a novel solution in the field of the integration of the Smart Grid and the Internet of Things. The definition of a web platform able to offer a RESTful interface to IEC 61850 Servers to a generic user is proposed. The web platform enables the mapping of information maintained by an IEC 61850 Server into MQTT messages.

EcoStruxure(TM) Grid Engineering Advisor generasi baru adalah IEC 61850 System Engineering Tool yang diakui oleh standar IEC yang dapat diterapkan pada setiap solusi otomasi sistem daya.

IEC 61850 is one of the most prominent communication standards adopted by the smart grid community due to its high scalability, multi-vendor interoperability, and support for several input/output ...

This design allows a generic IoT device and/or application based on oneM2M standard to access information maintained by IEC 61850 Server and related to the smart grid devices. The architecture of the proxy will be clearly described in the paper; emphasis on the semantic interoperability of the interworking scheme realized by the proxy will be ...

This paper defines an introduction and overview of the technology standard IEC 61850. The IEC standard offers reliability, efficiency, flexibility and interoperability needed in smart grids. The improved performance and sustainability of nowadays" smart grid led it to be the main used technology for distributed energy resources (DERs) and renewable energy resources, ...
