

Should utilities embrace smart grid technology?

As the energy landscape rapidly evolves, we believe it is imperative for utilities to embrace smart grid technologies wholeheartedly, leveraging them to help improve grid management, reduce operational costs and accelerate the energy transition.

Do smart grids save money?

Cost savings: By optimizing energy distribution and reducing the need for costly infrastructure upgrades, smart grids can deliver significant cost savings for consumers. Cost-reflective tariff design that incentivizes peak demand reduction can minimize the need for a new grid and peaking generation plant, thereby helping to avoid investment.

Will a net-zero grid become a smart grid?

From our perspective, this will be a highly disruptive system, requiring digital technologies to generate and analyze the data critical for network operators to plan and operate ever more sophisticated smart grids, and for consumers to capture the benefits of decentralization. In short, a net-zero grid should first become a smart grid.
