

# Solar and wind hybrid power generation Bosnia and Herzegovina

What is the solar power potential of Bosnia and Herzegovina?

Photovoltaic power potential of Bosnia and Herzegovina from global solar atlas [ 41 ]. In 2012, Bosnia and Herzegovina established the first solar power plant (SPP) in the site called Kalesija. This solar power plant generates a power of 120 kWh and the panels are distributed over 1200 m<sup>2</sup>.

How many wind farms are there in Bosnia & Herzegovina?

In total, there are seven current and planned wind farms with an annual production of 936.17 GWh. From all Balkan countries, it was found that Bosnia and Herzegovina has one of the largest potentials for the implementation of solar power plants.

Where is the first solar power plant in Bosnia & Herzegovina?

In 2012, Bosnia and Herzegovina established the first solar power plant (SPP) in the site called Kalesija. This solar power plant generates a power of 120 kWh and the panels are distributed over 1200 m<sup>2</sup>. Converted solar energy is sent to the Electric Power Industry of B&H. Its annual production counts 150,000 kWh of electricity.

Can solar power plants improve biodiversity in Bosnia and Herzegovina?

Future development of HPPs and the construction of new dams in Bosnia and Herzegovina should consider Strategic Environmental Assessments and effects on rivers' biodiversity. Solar energy has a great perspective for the implementation of solar power plants that counts for 70.5 ± 10.6 GWh of irradiated energy per year.

Is Bosnia and Herzegovina a good country for solar energy?

With around 60% of the land area, Bosnia and Herzegovina could have between 1.2 and 1.4 MWh/kWp of photovoltaic capacity compared to the world's solar potential. Compared to B&H and other Balkan countries, Serbia has a great potential for the implementation of solar energy.

What is the potential for bioenergy in Bosnia & Herzegovina?

Concerning bioenergy, the greatest potential lies in wood residues, since forests are one of the main natural resources of Bosnia and Herzegovina. There are currently two biogas power plants, but there is no available data about biofuel and other biowaste utilization.

## 1. Introduction

KfW Development Bank continues to support Bosnia and Herzegovina in generating electricity from renewable energy sources. This creates alternatives to coal-fired power generation, which dominates Bosnia and Herzegovina's electricity mix.

result in a significant shift towards renewables in Bosnia and Herzegovina's power sector, which has long remained reliant on coal-fired generation and hydropower. In a long term decarbonisation scenario, solar is

# Solar and wind hybrid power generation Bosnia and Herzegovina

expected to contribute to Bosnia and

emissions from renewable power is calculated as renewable generation divided by fossil fuel generation multiplied by reported emissions from the power sector. This assumes that, if renewable power did not exist, fossil fuels would be used in its place to generate the same amount of power and using the same mix of fossil fuels. In countries

The solar-wind hybrid tree provides a better alternative to conventional solar PV and wind turbine systems. A hybrid tree is an artificial structure that resembles a natural tree and has branches on top of which are mounted solar modules or wind turbines.

The solar-wind hybrid tree provides a better alternative to conventional solar PV and wind turbine systems. A hybrid tree is an artificial structure that resembles a natural tree ...

Ventus industria plans to build the first hybrid power plant in Bosnia and Herzegovina. The firm plans to build a solar power plant and a wind farm in Ravno in the country's south, near the border with Croatia and some twenty kilometers from the Adriatic coast.

In 2012, Bosnia and Herzegovina established the first solar power plant (SPP) in the site called Kalesija. This solar power plant generates a power of 120 kWh and the panels are distributed over 1200 m<sup>2</sup>.

Bosnia and Herzegovina is well endowed with renewable energy resource potential; however, the sector is still in its initial stage of development. While biomass is the most abundant renewable energy ...
