

What is a solar fountain?

A solar fountain is a water feature that utilizes solar power to operate. It consists of a solar panel, a fountain pump, and sometimes a battery pack for energy storage. Unlike traditional fountains that rely on electricity or batteries, solar fountains harness the clean and renewable energy of the sun to create beautiful water displays.

Does a water fountain have a solar panel?

The water circulates through five tiers of ceramic bowls and, unlike many of the other fountains on this list, has an external solar panel. This feature means you can hide the panel, or position it to get better sunlight than the fountain's position allows, giving you a little more flexibility.

Does a solar fountain have a battery?

If the solar fountain includes a battery pack, it is usually installed in its base or a separate enclosure. The battery stores excess electricity generated by the solar panel and provides power to the pump when sunlight is limited.

How do you use a solar fountain?

Simply connect the pump to the tube in the fountain, connect the LED light cord and solar pump cord to the solar panel and place the panel in the sun. The solar with battery backup option allows one to harness solar energy even when there is no sunlight!

What is included in a Solar Patio fountain?

o **CONTENTS INCLUDED:** This solar patio fountain includes a solar panel with rechargeable battery pack, compatible submersible water pump, and 16' power cord so it can be installed in a convenient location. o **EASY TO USE:** This 2-tier water feature only needs sunlight to run properly, no ugly extension cords needed.

How does a solar power fountain work?
