

The mini grids will utilize solar energy, diesel generator and battery energy storage system, tailored specifically to the unique geographic and climatic conditions of Chuuk. This innovative approach will reduce dependency on fossil fuels, mitigate carbon emissions, and pave the way for a greener future for the region.

If photovoltaic solar power - one of the simplest and most reliable renewable energy systems - has problems in Micronesia, how can we hope to solve our energy problem? The solutions lie in fitting renewable energy systems into traditional Micronesian ways of life.

The Renewable Energy and Energy Efficiency in the Federated States of Micronesia project contributes to the FSM's Energy Master Plan focused on rapidly boosting access to energy for its peoples whilst reducing the reliance on fossil fuel imports to drive energy supply.
