

Aptech Africa implemented solar systems in 11 distinct villages, featuring capacities of 5kWp, 15kWp, and 20kWp, coupled with battery energy storage ranging from 12kWh to 36kWh. Among these, one system is hybrid, while the rest are standalone systems coexisting with generators and the existing grid.

The project is expected to meet 100% of the island's current energy demand and will be the largest self-sufficient solar project on the continent of Africa upon completion, it is claimed.

To capitalize on this potential, the government of Equatorial Guinea has initiated several solar power projects in recent years. In 2018, the country signed a memorandum of understanding with the multinational company Atlas Renewable Energy to ...

Despite logistics challenges, Aptech Africa has installed 11 solar systems in Equatorial Guinea featuring capacities of 5kWp, 15kWp, and 20kWp, coupled with battery energy storage ranging from 12kWh to 36kWh.

Equatorial Guinea: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Solar resource and PV power potential maps and GIS data can be downloaded from this section. Maps and data are available for 200+ countries and regions. Please select a region or a country in the menu below. The maps and data have been prepared by Solargis for The World Bank.
