

Does North Korea still use solar power?

In this installment of our series on North Korea's energy sector, we move away from official and commercial uses of solar and seek to understand the growing use of solar power for personal energy consumption in a country where its people still suffer from an unreliable power supply nationwide.

How many solar panels are there in North Korea?

The Korea Energy Economics Institute in Seoul estimates that 2.88mn solar panels, mostly small units used to power electronic devices and LED lamps, are now in use across North Korea, accounting for an estimated 7 per cent of household power demand.

Can solar power solve North Korea's energy problems?

Jeong-hyeon, a North Korean escapee, told the Financial Times that many residents in Hamhung, the second-most populous city, "relied on a solar panel, a battery and a power generator to light their houses and power their television". But solar power is still only a partial solution to the country's energy woes.

Does North Korea have energy security challenges?

Access to solar panels has created capacity where the state falls short, but the overall energy security challenges facing the nation are daunting. This report, "North Korea's Energy Sector," is a compilation of articles published on 38 North in 2023 that surveyed North Korea's energy production facilities and infrastructure.

Where are solar panels made in South Korea?

South Korea's solar panel supply chain is anchored in key cities, each contributing uniquely to the industry's ecosystem. One prominent city is Ulsan, known for its industrial prowess. Ulsan has become a hub for solar battery manufacturers and solar inverter manufacturers, thanks to its advanced manufacturing facilities and a skilled workforce.

How much do solar panels cost in North Korea?

This has allowed many North Koreans to install small solar panels costing as little as \$15-\$50, bypassing the state electricity grid that routinely leaves them without reliable power for months. Larger solar installations have also sprung up at factories and government buildings over the past decade.

In this installment of our series on North Korea's energy sector, we move away from official and commercial uses of solar and seek to understand the growing use of solar power for personal energy consumption in a country where its people still suffer from an unreliable power supply nationwide.
