

What is a photovoltaic power generation project?

photovoltaic (PV) power generation project involves design, construction, and operation of a PV power plant over a performance period of 20-30 years. The duration of a financial prospectus or power purchase agreement (PPA) often determines the expected performance period.

Do solar projects need an EPC contract?

In our experience, most utility-scale solar projects use an EPC Contract. An operation and maintenance agreement: This is usually a medium- to long-term Operating and Maintenance Agreement (O&M Agreement) with an Operator. The term of the O&M Agreement will vary from project to project.

How does energy affect a PV operation contract?

In most PV operation contracts, energy will be the driving factor of whether the system is operating as expected. EPC guarantees, operator guarantees, owner measure of ROI, and other considerations for a contract are mostly based on whether the system produced energy as it was expected to.

How long will a grid connected PV power plant last?

Grid connected PV power plants are expected to have a technical lifetime of decades, with maintenance, repairs or modifications required to ensure continued power production. Several PV plants have already demonstrated their ability to operate over time spans of decades.

Is there an O&M contract template for solar power plants?

There is also an O&M contract template prepared from the joint effort between the Terawatt Initiative and the International Renewable Energy Agency (IRENA); this template is specific to solar power plants.

Will EPC contracts provide for the handover of a solar facility?

EPC Contracts will not provide for the handover of the solar facility to the Project Company, and the PPA will not become effective until all commissioning and reliability trialling has been successfully completed.

The NEM tenure will be for a period of ten (10) years on commencement of the NEM Contract. After the ten (10) years period, the solar PV Installation shall be strictly for self-consumption in the Premise where the solar PV installation is ...
