

What to do with solar energy in Estonia?

We have prepared an exciting tour - go on a ride on the wind turbine nacelle or take a walk at the solar park, the annual electricity output of which is equivalent to the average annual consumption of 300 Estonian homes. We produce renewable solar energy in Estonia and Poland. We own 38 solar parks with a total capacity of 30 MW.

How many solar panels are installed at Estonia dairy farm?

We built a solar power plant on the roof of Estonia Dairy Farm in Järva County, where we installed 644 solar panels. Over the years, we have vigorously expanded our solar energy production. The parks are located in 38 locations. More than 100 000 solar panels in total are located in our solar parks. The parks are located in 38 locations.

Why do solar parks generate the most electricity in Estonia?

In Estonia, solar parks usually generate the most electricity in May, as the days are quite long and the temperature is lower than in June-July. Lower temperatures help increase efficiency. It is also possible to generate energy in cloudy weather, because solar radiation reaches the solar panels through the clouds as well.

Does Estonia have a good energy policy?

So far, it has been a key objective of Estonian energy policy. Being a Nordic country with less sunlight than in Western and Southern Europe, Estonia has achieved a solid place at the top with its 1,923 sunny hours in the year.

Where is Solarstone based?

Solarstone, an Estonian producer of building-integrated photovoltaic (BIPV) solar roofs, has opened a 60 MW manufacturing facility in Viljandi, Estonia, to produce a broader range of design and performance specifications. Estonian BIPV specialist Solarstone said this week that it has built a new 60 MW factory in Viljandi, Estonia.

How much solar energy does Poland generate a year?

Our solar parks in Poland generate about 20 GWh of solar energy per year, being sufficient for almost 7000 homes with average consumption for a year. Renewable energy production has become by far our most profitable field of activity - our wind farm and solar park play a significant role in this.

A solar power plant is the easiest-to-install solution for local electricity needs and reduces the environmental footprint of industrial or office buildings. Increases productivity Increasingly higher outdoor temperatures increase the need for electricity in the summer to cool buildings, and the ...

Solarstone, an Estonian producer of building-integrated photovoltaic (BIPV) solar roofs, has opened a 60 MW

manufacturing facility in Viljandi, Estonia, to produce a broader range of design and...

We produce and develop renewable energy in Estonia, Latvia, Lithuania, Poland, and Finland. We own 27 wind farms, 42 solar power plants, one cogeneration plant, and one hydroelectric plant ...

Estonia has seen a significant increase in its solar power capacity in 2022, becoming one of the leaders in solar power per capita among EU members. With growing investments and ...
