

Solar power generation and photoelectric conversion

What is solar energy conversion?

Quantum photoelectrochemistry calculation of photoinduced interfacial electron transfer in a dye-sensitized solar cell. Solar energy conversion describes technologies devoted to the transformation of solar energy to other (useful) forms of energy, including electricity, fuel, and heat.

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

How do photovoltaic cells convert solar energy?

Photovoltaic cells (made of semiconductor material) absorb photons, elementary particles present in sunlight. The absorbed photons excite the electrons present in the photovoltaic cell and the movement of these electrons generates an electric current. In solar thermal conversion, solar energy is stored in the form of thermal energy.

What is photovoltaic conversion?

The process of directly converting sunlight into electricity without using a heat engine is known as photovoltaic conversion. The fundamental benefit of photovoltaic devices is that they are made as standalone systems, allowing them to provide outputs ranging from microwatts to megawatts.

How is solar energy generated?

Solar energy is generated by photovoltaic conversion and solar thermal conversion technologies. In photovoltaic systems, electrical energy is generated and stored from solar irradiation. Photovoltaic solar energy is based on the photoelectric effect, in which some materials are able to absorb luminous particles and release electrons.

How do solar cells convert sunlight into electricity?

Sunlight can be directly converted into electricity in solar cells via the photovoltaic (PV) effect. This chapter examines the fundamental mechanisms behind this energy conversion process. PV conversion will only occur in a device exhibiting two necessary behaviors.
