

What is a solar land lease?

A solar land lease is an agreement between a developer and a landowner where the landowner rents land to a developer to house photovoltaic solar arrays and develop solar energy. A solar land lease typically is a long-term agreement spanning twenty to forty years.

Do landowners get paid for a solar project?

The landowner typically receives annual lease payments or in some cases, may even sell a portion of their land for the solar project. The lease payments become a source of passive income for the landowner and help increase the use of clean energy.

Can you lease land for solar development?

Landowners in some regions are being approached with exploratory offers to lease their land for solar development. Solar developers may be in contact with a number of landowners to see if there is sufficient interest and land area to develop a project.

What makes a good solar land lease?

These include the reputation and stability of the solar developer or company, how many solar projects they have developed, whether they intend to own the solar project or sell it once it reaches construction, your own intentions for the land, and the lease rate. How long does a solar land lease typically last?

How are lease rates determined for solar land?

Lease rates for solar land are determined through negotiations between the landowner and the solar company. Several factors can influence the lease rate, including the size and quality of the land, solar resource potential, local market conditions, and the cost to develop and build the solar project.

How long does a solar farm lease last?

The lease requires the landowner to dedicate a portion of their land to solar for a set period, typically 20-25 years. During the operational period of the solar farm, the use of that portion of the land is limited and may require permission from the solar company.
