

How many solar power plants are there in Norway?

In 2023, most of the solar power in Norway is installed on the roofs of households and industry, and primarily cover their own consumption. As of 31 March 2023, there are no dedicated solar power plants in Norway. During 2022, approximately 153 MW of new solar power was installed in Norway.

Why is solar power growing in Norway?

Despite the low energy prices, solar power is growing rapidly in Norway. In 2016 four times as much capacity was installed as the year before, mostly on commercial buildings and private homes connected to the grid. Norwegian companies are also important players in the production of crude silicon and silicon wafers for the solar cell industry.

Do companies know about solar energy in Norway?

During interviews, some firms however, point out that they experience a limited attention and knowledge about PV. As a general indicator of attention to PV, we searched news media and parliamentary databases to observe the frequency of mentioning of solar energy compared to other renewable energy technologies in Norway.

Is solar power a viable option in Norway?

Norwegian hydropower is currently so cheap that power companies do not consider it attractive to build solar power plants in Norway. In recent years, however, companies have started selling or leasing solar systems to private customers and businesses in Norway. Despite the low energy prices, solar power is growing rapidly in Norway.

How do power plants in Norway work?

Many power plants in Norway have storage reservoirs and production can therefore be adjusted within the constraints set by the licence and the watercourse itself. Wind and solar power are intermittent; electricity can only be generated when the energy is available.

How much solar power will Norway produce in 2023?

The same law sets a target of 8 terawatt hours (TWh) of solar electricity generation by 2030, which equates to 5% of total 2022-2023 generation levels. For comparison, solar power produced 0.1% of Norway's electricity generation in 2023. Solar companies include Elkem Solar and NorSun.

Overview Mode of production Production and consumption Transmission Price Export/Import See also Further reading Hydroelectric power is the main mode of electricity production. Norway is known for its particular expertise in the development of efficient, environment-friendly hydroelectric power plants. Calls to power Norway principally through hydropower emerged as early as 1892, coming in the form a letter by the former Prime Minister Gunnar Knutsen to parliament. Ninety percent of hydropower c...

Norway has installed the world's northernmost ground solar panels in its Svalbard archipelago, a region plunged in round-the-clock darkness all winter. The pilot project could help remote...

In May 2022, the granting of a concession for the Furuseth solar power plant in Stor Elvdal municipality in Innlandet county marked a significant step towards expanding solar power in Norway. As the country's first land-based solar ...

The customized PV plant for self-consumption is a step closer towards their important goal; shifting entirely to renewable energies in order to become a climate neutral organisation. With this pilot photovoltaic project, ...
