

Can I make a solar panel in a custom shape?

Yes, it is possible to make a solar panel in a custom shape. At Voltaic, we manufacture custom and standard small solar panels and while most are rectangular, we have experience designing and deploying a full range of interesting shapes and sizes.

What is a photovoltaic solar panel?

Photovoltaics, more commonly known as solar panels, are one of the purest and most reliable methods for producing renewable energy. Each panel is composed of photovoltaic cells, which activate when exposed to the sun, absorbing its rays and converting them into clean electricity.

Are architects getting creative with solar panels?

While it is not uncommon for solar cells to be installed as an afterthought, this roundup demonstrates how architects are getting creative with the technology, making it a key feature in their designs without compromising on aesthetics. Read on for 10 buildings completed and upcoming that incorporate solar panels in creative ways:

What do photovoltaic panels look like?

Traditionally relegated to roofs, photovoltaic (PV) panels tend to have a uniform appearance: large black or dark blue rectangular pieces of shiny glass with metal frames.

How does a semi-transparent photovoltaic system work?

The semi-transparent photovoltaic units are able to absorb solar radiation without blocking natural light from entering the offices, leading to a 28% reduction in energy use. Between the "mosaic" of photovoltaic panels and the inner glass facade are partially enclosed balconies for the employees to enjoy.

What is a rounded form sheathed in photovoltaics?

A rounded form sheathed in photovoltaics will define Sun Rock, an office and operations facility that MVRDV is developing for power company Taipower in Taiwan. The studio designed its bulbous form to maximise the amount of sunlight its facade can harness throughout the day and, in turn, create enough energy to make the building self-sufficient.
