

Getting started with the Srcful Energy Gateway n. This guide will help you get started with the Srcful Energy Gateway. Depending on your hardware, you can choose between two different approaches to get started. The first approach is for users who have a Rak Hotspot Miner V2 and want to dual-mine IoT and SRC.

Scalability: As the energy gateway system grows and more individuals and organizations join the network, there may be challenges in scaling the system to accommodate the increased demand. This could include issues related to data processing and storage, as well as the need to expand the wireless communication infrastructure. ...

The Sourceful Energy Gateway is an innovative device designed by Sourceful to seamlessly integrate renewable energy sources, such as solar panels and battery systems, into a decentralized energy network. This user-friendly gateway empowers homeowners to actively participate in the renewable energy movement while earning rewards in the form of ...

Introduction Srcful primarily exists to accelerate and facilitate the expansion of renewable energy sources. Over the past two years, our project has been dedicated to enhance the use of solar panels and home batteries, known as Distributed Energy Resources (DERs), in urban and suburban homes. This initiative resulted in the development of the Energy Gateway, ...

The Srcful Energy Gateway, central to our project, is a testament to our commitment to cutting-edge technology and environmental sustainability. This innovative device will connect small-scale renewable energy producers to the grid, leveraging Solana's blockchain for secure and transparent transactions. This not only promotes a sustainable ...

The Sourceful GraphQL API provides access to production data from various energy assets. It is designed to be flexible, allowing users to query the data in various resolutions and time frames. This documentation explains how to interact with the API using GraphQL. API Playground

The crypto-chip within the Energy Gateway signs transactions for verifiable source, ensuring transparency and reliability within the system. With its innovative approach and commitment to a more sustainable future, Sourceful have the potential to drive the necessary change towards renewable energy and a more open, stable and equitable energy ...

The Sourceful Energy Gateway is a user-friendly and innovative device designed to connect Decentralized Energy Resources (DERs) such as solar plants and battery storage to Sourcefuls energy network. It enables users to participate in building a global virtual power plant (VPP) while earning rewards for their contributions.

Discover the power of Srcful's Energy Gateway for efficient energy management. Earn SRC tokens while contributing to a decentralized energy network. Join the renewable energy revolution with Srcful today! We are currently upgrading our documentation center, which may temporarily cause some links to show 404 errors. These links will be restored ...

We are thrilled to announce a significant milestone for Srcful as we embark on a new partnership with RAKWireless, a leader in IoT solutions. RAKWireless has officially begun distributing the Srcful Energy Gateway through their online store.

It's about clarity, purpose, and energy: Clarity: "Sourceful" is immediately understandable, removing any confusion about pronunciation or meaning. Purpose: It directly connects to our mission of sourcing and providing sustainable energy solutions. Energy: The word itself feels energetic and positive, aligning perfectly with our industry and goals.

The Srcful platform can serve as a powerful tool to complement these incentives and encourage even more individuals to invest in renewable energy sources. By using the Srcful Energy Gateway to measure and validate the energy generated by distributed energy resources (DERs), individuals can earn SRC tokens for their contributions to the ...

We at Srcful are excited to share a pivotal development in our journey: the awarding of a grant from The Swedish Energy Agency. This grant is not just a financial boost; it's a recognition of our...

You can mine SRC tokens by connecting a compatible DER like a solar inverter or battery to the Srcful network using the Srcful Energy Gateway hardware device. This gives your DER a digital identity on the blockchain so it can participate in the network. The gateway connects wirelessly to the Helium and WiFi networks to send DER data to Srcful.

Terms and Conditions 1. Background . These terms and conditions (the "Terms and Conditions") govern the access to and use of the Srcful website, platform, products, and other services provided by Srcful (collectively, the "Services"), between the End User and Srcful AB ("Srcful").. The Services provides a blockchain-based service for management, measurement and ...

Getting started . Connect the Energy Gateway to the internet using an Ethernet cable, and power it on by connecting the power cable.. Wait approximately 10-15 minutes for the Energy Gateway to start up and fetch the latest firmware.. If you wish to use Wi-Fi instead of Ethernet, you can remove the Ethernet cable at this point.. Pairing over Bluetooth
