

CIP, through Copenhagen Energy Islands, Lhyfe, and Flexens have decided to jointly launch the Å...land Energy Island project that aims to develop large-scale hydrogen production on Å...land integrated with gigawatt-scale offshore wind in Å...land waters for use both on Å...land and in the wider European region.

The energy and power system modeling software PLEXOS was used to study the future renewable energy system of Å...land and the role of storages in that system. The paper contributes by providing an analysis of the cooperation of the thermal and electrical storages in the island energy system.

Copenhagen Infrastructure Partners (CIP), Flexens and Lhyfe have partnered to develop an integrated energy island powered by offshore wind on the Å...land island archipelago off the Finnish coast. Called the Å...land Energy Island project, it will support gigawatt-scale offshore wind and green hydrogen production in Finland.

Flexens, Lhyfe and Copenhagen Infrastructure Partners (CIP) are to start developing a large-scale hydrogen production facility in Å...land. The project will combine zero-emission hydrogen production with offshore wind power, which will be built in the Å...land Islands with a capacity of several gigawatts. Final investment decisions will be taken later.
