

Tokelau, an island nation in the South Pacific, is now completely able to support itself with solar energy. Elly Earls met Joseph Mayhew of the New Zealand Aid Programme to find out how this tiny collection of atolls has become almost ...

This report highlights the world-first achievement of Tokelau in using renewable energy sources (solar energy and coconut oil) for all its electricity. It explains why Tokelau decided to switch from using fossil fuels and includes comments from a Tokelau ...

Foreign Affairs Minister Murray McCully today welcomed the completion of a third New Zealand-funded solar power system in Tokelau - meaning almost 100 per cent of the territory's electricity needs are met through solar generation.

A week ago New Zealand solar systems installer PowerSmart said it had wrapped up 1 MW of solar installations that can meet 150% of the current electricity needs of Tokelau. The islands, administered by New Zealand, have a population of about 1,500 people.

RES: 1MW off-grid solar energy system across three main atolls of Tokelau. The project includes : 4032 solar modules, 196 string inverters, 112 DC charge controllers, 84 battery inverters and 1344 batteries in 48V banks. ...

Solar Array's seen on the three tiny islands of Tokelau to completely produce solar power energy. The renewable energy system comprising of solar panels, storage batteries and generators running on biofuel derived from coconut will generate enough electricity to meet 150% of the islands' power demand.

They decided that solar energy could be a cost-effective option well-suited to Tokelau's climate. Over four thousand solar panels were installed, making Tokelau the first nation in the world to convert to 100 percent renewable energy.
