

Why do Armenians use solar energy?

The reason for this is that average solar radiation in Armenia is almost 1700 kWh/m<sup>2</sup> annually. One of the well-known utilization examples is the American University of Armenia (AUA) which uses it not only for electricity generation, but also for water heating. The Government of Armenia is promoting utilization of solar energy.

Does Armenia need a solar power plant?

In 2019, the European Union announced plans to assist Armenia towards developing its solar power capacity. The initiative has supported the construction of a power plant with 4,000 solar panels located in Gladzor. Solar power potential in Armenia is 8 GW according to the Eurasian Development Bank.

How much solar energy does Armenia produce a year?

According to the Ministry of Energy Infrastructures and Natural Resources of Armenia, Armenia has an average of about 1720 kilowatt hour(kWh) solar energy flow per square meter of horizontal surface annually and has a potential of 1000 MW power production.

Where is the biggest solar water heater in Armenia?

The biggest solar water-heater in Armenia is located at Diana hotel in Goris, which has 1900 vacuum tubes that provide hot water for a swimming pool with 180 cubic meter volume, and for 40 hotel rooms.

TAKE YOUR PART OF SUN (+374) 55-744-211; (+374) 91-744-211. Follow us . About us; ... The goal of the company is to develop the clean and renewable energy sector in Armenia, to ensure energy security. PV solar panels types . The company offers poly-crystalline, mono-crystalline, Poly and Mono PERC type, and glass-to-glass technology PV panels ...

This issue is recognized all over the world, and that is why renewable sources of energy are used such as sun, wind and water. Read more. Solar water-heaters. ... In Armenia this branch of renewable energy is more than attractive. Read more. Energy saving measures. Most of the time we spend in close spaces: at home, in the office, in ...

Armenia: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO<sub>2</sub> - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.
