

The Holcomb Energy System (HES) is a transformational technology that can help to address some of the world's most critical energy issues, such as rampant carbon emissions, rising global...

After 13 years of intense and extensive research and development, we have redesigned the traditional electrical generator into the Holcomb Energy System (HES), enabling self-sustaining...

From solar panels and energy storage solutions to wind power technology and electric vehicle charging stations, Holcomb Energy Systems has developed a range of sustainable energy solutions that are helping individuals and businesses reduce their carbon footprint and move towards a more sustainable future.

Dr. Holcomb has also patented numerous environmentally friendly products, processes, and devices, including a CO2 converter that captures CO2 in power plant emissions and in the atmosphere and ...

The Holcomb Energy System eliminates the need for centrally generated power plants and instead places energy production right where it is being used - in homes, commercial buildings, transportation, consumer electronics and along the grid.

Holcomb Energy Systems is setting a new industry standard in electric power generation. Our core technology, the Holcomb Energy System (HES), is an entirely new source of energy -- using no fuel and putting out zero emissions, it is scalable, silent, and point of use.
