

Solar cells combining two active layers make better use of light than conventional single-layer cells. As a result, such tandem cells yield more electricity per unit area. Swiss researchers combine technically optimized silicon and thin-film ...

In other words, a hybrid solar system generates power in the same way as a common grid-tie solar system but uses special hybrid inverters and batteries to store energy for later use. For ...

July 7, 2023 - Scientists from EPFL's Photovoltaics and Thin Film Electronics Laboratory (PV-Lab) and CSEM have made remarkable progress in the photovoltaics field, specifically in perovskite-on-silicon tandem solar cells, ...

Hiperion's hybrid panels leverage both technologies, increasing their power production during direct sunlight and relying on conventional photovoltaics during cloudier conditions. Hiperion's modules are currently being manufactured at a pilot production line in the Innoparc technology park in Neuchâtel.

The vision of SUNSHINE is to demonstrate a new inverter topology for photovoltaic applications, the so called Adjustable Hybrid Switch inverter (AHS). In this project, we aim to demonstrate that this topology is able to both reduce costs of SiC inverters while offering comparable efficiency.

Solar cells combining two active layers make better use of light than conventional single-layer cells. As a result, such tandem cells yield more electricity per unit area. Swiss researchers combine technically optimized silicon and thin-film cells with the latest perovskite technology to achieve record-high efficiencies.

Research and numerous experiments have shown the high efficiency of solar modules built on cells made of synthesized perovskite crystals. Among other new solar materials (organic PV-cells, dye-sensitized solar cells) ...

In other words, a hybrid solar system generates power in the same way as a common grid-tie solar system but uses special hybrid inverters and batteries to store energy for later use. For this reason, hybrid solar systems are oftentimes described as off-grid solar with utility backup power or grid-tie solar with extra battery storage.

significance of solar thermal energy in Switzerland for the next 30 years. Based on the energy system model, "Swiss Energyscope" of ETH, domestic hot water preheating, geothermal probe/ice storage regeneration, and solar district heating achieve a techno-economic potential of 5 - 10 TWh/a or 2 - 4 % of the overall energy consumption.

Research and numerous experiments have shown the high efficiency of solar modules built on cells made of

synthesized perovskite crystals. Among other new solar materials (organic PV-cells, dye-sensitized solar cells) they stand out ...

Hybrid solar panels, also called PVT elements, will channel this unused low-temperature heat, as shown by a large-scale demonstration plant in Switzerland. The PVT system's 1,300 m²; are used to regenerate a borehole field in a Swiss multi-family housing area.

July 7, 2023 - Scientists from EPFL's Photovoltaics and Thin Film Electronics Laboratory (PV-Lab) and CSEM have made remarkable progress in the photovoltaics field, specifically in perovskite-on-silicon tandem solar cells, by achieving an impressive efficiency of ...
