

Switzerland: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

The sectoral breakdown of a country's energy demand, which is based on its economy, geography and history, can greatly impact its energy needs and which energy sources it relies on to meet those needs - such as fueling automobiles, heating or cooling homes or running factories.

Most energy consumed in Switzerland is in the form of petroleum and motor fuels (43%), followed by electricity (26%) and gas (15%). Most of this energy is used by private households and transport (each one third), while manufacturing and services each ...

Switzerland's energy relies mainly on hydroelectric, nuclear, and natural gas, as well as imported petroleum for cars since Switzerland produces no fossil fuels. Launched in 2011, the 2050 Energy Strategy aims to shift towards sustainable energy practices, achieving climate neutrality and reducing reliance on fossil fuels.

The Energy Perspectives 2050+ (EP 2050+) analyse in a net-zero emissions scenario (ZERO) how to develop an energy system that is compatible with the long-term climate goal of net-zero greenhouse gas emissions by 2050 and, at the same time, ensures a secure energy supply.

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided

Switzerland's overall energy consumption in 2021 included petroleum products (43%), electric power (26%), natural gas (15%), and wood and coal (6%). Switzerland is nearly self-sufficient in electricity production. In 2021, more than 680 hydroelectric plants generated 61.5% of the electricity consumed in Switzerland.

Switzerland's energy balance provides information on domestic production, import / export, storage, conversion, own consumption, transport and grid losses and consumption of the various energy carriers in Switzerland on an annual basis.

The Energy Perspectives 2050+ (EP 2050+) analyse in a net-zero emissions scenario (ZERO) how to develop an energy system that is compatible with the long-term climate goal of net-zero greenhouse gas emissions by 2050 and, at ...
