SOLAR PRO. Technical Specifications for Waste Lithium Battery Energy Storage

What is waste lithium-ion battery recycling?

Waste lithium-ion battery recycling technologies (WLIBRTs) can not only relieve the pressure on the ecological environment, but also help to break the resource bottleneck of new energy industries, thereby promoting the development of a circular economy, enhancing both sustainability and economic efficiency [8].

Is lithium ion battery the energy storage of the future?

Accordingly, surplus energy must be stored in order to compensate for fluctuations in the power supply. Due to its high energy density, high specific energy and good recharge capability, the lithium-ion battery (LIB), as an established technology, is a promising candidate for the energy-storage of the future.

What is the recycling route for retired lithium ion batteries?

In the case of battery manufacturer responsibility, there are two recycling routes for retired LIBs. One is the collection by EV manufacturers, and the other is the collection by the battery leasing company.

What is the pretreatment of waste lithium batteries?

Discharge, battery disassembly, and sorting are typically involved in the pretreatment of waste LIBs. Following pretreatment, the waste batteries can be broken down into various components such as aluminum and copper foils, separators, plastic, and others.

How big is the lithium-ion battery market?

The lithium-ion battery market is increasing exponentially,going from \$12 billion USD in 2011 to \$50 billion USDin 2020. Estimates now forecast an increase to \$77 billion USD by 2024. Data from the International Energy Agency shows a sixfold increase in lithium-ion battery production between 2016 and 2022 (Fig. 1).

Why are lithium-ion batteries being recycled?

Lithium-ion batteries are being recycled on an international scale. This is not only largely due to environmental pressures but also attributed to the economic benefit of recovering metallic lithium-ion battery constituents. Several companies have developed methods to handle the influx of end-of-life lithium-ion batteries entering the waste stream.
