

# The hydrophobic and oleophobic effects of photovoltaic panels

Why are superhydrophobic coatings used in solar photovoltaic panels?

The superhydrophobic coatings are widely used in solar photovoltaic panels owing to their excellent nonadhesive properties. These coatings prevent the dust from penetrating into the surface with their micro-/nano-hierarchical structures as observed in the lotus leaves.

How does hydrophobic nanocoating affect PV panels?

Hydrophobic nanocoating impacts on the PV panels' current-voltage and power-voltage curves. Numerous factors, such as dust accumulation and light reflection off PV panel surfaces, adversely affect the performance and efficiency of PV solar panels. On PV panels, dust accumulation increases with time.

Why do photovoltaic modules need anti-reflective and superhydrophobic coatings?

Photovoltaic modules are long-term exposed outdoors, and the surfaces are easily covered by dust, which seriously affects the power generation efficiency and increases the workload of maintenance. An anti-reflective and superhydrophobic coating with excellent durable and self-cleaning properties was proposed to improve this problem.

Are antireflective Superhydrophobic self-cleaning solar panels durable?

The prolonged functioning of antireflective superhydrophobic self-cleaning properties of solar panels for realistic applications lies in the durability of the coatings.

Can hydrophobic coatings be applied to PV modules?

Esfahani et al. prepared hydrophobic coatings with anti-icing properties using sol-gel method, all of which have excellent self-cleaning properties and can be applied to PV modules working in extreme environments.

Are superhydrophobic nanocomposite coatings suitable for solar energy applications?

Solar energy applications require coatings with too high a lifespan. Although the use of resin has improved the durability of coatings, superhydrophobic nanocomposite coatings cannot always meet the needs of the application due to the loss of superhydrophobicity caused by mechanical and chemical damage.

Recent research on durable, antireflective solar panel coatings with self-cleaning and superhydrophobic properties proposes to increase the durability with a double-layer film ...

Transparent, superhydrophilic materials are indispensable for their self-cleaning function, which has become an increasingly popular research topic, particularly in photovoltaic (PV) applications. Here, we report hydrophilic ...

Generally, solid particulate matter suspended in the air with a particle size of less than 500  $\mu\text{m}$  is called dust. The

# The hydrophobic and oleophobic effects of photovoltaic panels

dust gather on the surface of the panel mainly comes from two ...

Here, we report hydrophilic and superhydrophilic ZnO by varying the morphology for use as a self-cleaning coating for PV applications. Three different ZnO microstructures, such as ZnO nanorods (R-ZnO), ZnO ...

Cleaning with rain is whispered as an efficient cleaning method, but in reality, it is a low-efficiency cleaning method and if local environmental contamination is high, debris leaves over the solar ...

The present invention relates to a kind of hydrophobic oleophobic self-cleaning coating and the preparation method and application thereof, solar energy to equip, and belongs to self ...

The angle denoted as  $\theta$  in Young's Equation is termed the Young's Contact Angle (YCA) or Contact Angle (CA) for short. In the case where the liquid is water, it is specifically ...

Surfaces that simultaneously exhibit hydrophobicity, high contact angle, and high transmission of visible light are of interest for many applications such as optical devices, ...

This research aims to experimentally improve the overall efficiency of solar photovoltaic (PV) panels by coating them with hydrophobic SiO<sub>2</sub> nanomaterial. Also, an accurate mathematical model was used to ...

Photovoltaic (PV) power generation is a clean energy source, and the accumulation of ash on the surface of PV panels can lead to power loss. For polycrystalline PV panels, self-cleaning film is an economical and ...

Inspection of the results (Table 1) revealed that bacteria did not grow on any of the unwashed finished cotton samples, on either hydrophobic (PDMSU), oleophobic (FAS and PFOTES), or ...

When exposed to sunlight, the Y6-NanoSH coated photovoltaic panel raises its surface temperature, inhibiting the growth and accumulation of ice and frost on its surface. This is achieved through a combination of ...

Muhammad, A.J., Reca, J. & Martinez, J. Application of a hydrophobic coating to a pressurized pipe and its effect on energy losses and fluid flow profile. Sci Rep 14, 8236 ...

Scientists at Al-Azhar University in Egypt have developed a hydrophobic nanocoating with a self-cleaning effect that can reportedly increase the efficiency of solar panels by up to 30.7%. "The ...

Antireflective (AR) coatings, as the most widely used and maximum output of all optical coatings, have important applications in solar panel, architectural glass, modern ...
