

The latest compensation standards for photovoltaic panel damage

Can solar panels be damaged by frost-heave?

Movement of footing as a result of frost-heave may lead to permanent damage to the solar rack and power generation in the solar panels. Lack of a uniform engineering standard adds complexity to the liability arising from the solar panels, particularly for flat roof installations.

Why is insurance important for photovoltaic plant operations?

Insurance is important to several aspects of photovoltaic (PV) plant operations. Insurance is often a prerequisite for financing, operating permits, interconnection agreements, and leases or as part of a power purchase agreement for an on-site PV system. The history of insurance for PV systems is short compared to other types of assets.

Is the distributed solar photovoltaic market safe?

In the rapidly evolving solar industry, state and local governments and industry groups are implementing a variety of approaches to ensure that consumers who choose to interact with the distributed solar photovoltaic (DPV) market remain safe and are treated fairly.

Are solar panels susceptible to hail damage?

Virtually all solar panel manufacturers use glass for the top surface of the panel and all pass the same tests intended to represent impact from hail. However, hail is becoming a bigger financial risk for insurers, and they're not covering all the damage.

What is a photovoltaic insurance policy?

A major component of operation-and-maintenance costs for commercial or utility-scale photovoltaic (PV) systems is insuring against losses from physical damage or liability for losses caused to others (Speer, Mendelsohn, and Cory 2010).

What are the risks associated with PV panels?

Recently, PV panel installations have also faced significant risks of degradation and potential accidents due to exposure to natural disasters. Events like high temperatures, floods, earthquakes, and heavy rain substantially threaten the structural integrity and operational effectiveness of PV panels.

The typical damage impacts of hail are shown in Table 1; it mainly depends upon the size, intensity, and probable kinetic energy [[20], [21], [22], [23]]. As illustrated in Table 1, ...
