What is a photovoltaic (PV) cell?

A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Some PV cells can convert artificial light into electricity. Sunlight is composed of photons, or particles of solar energy.

How do photovoltaic cells convert solar energy?

Photovoltaic cells (made of semiconductor material) absorb photons, elementary particles present in sunlight. The absorbed photons excite the electrons present in the photovoltaic cell and the movement of these electrons generates an electric current. In solar thermal conversion, solar energy is stored in the form of thermal energy.

What are the basic principles of photoelectric conversion?

Fundamentals of photoelectric conversion: charge excitation, conduction, separation, and collection. Lectures cover commercial and emerging photovoltaic technologies and cross-cutting themes, including conversion efficiencies, loss mechanisms, characterization, manufacturing, systems, reliability, life-cycle analysis, ...

What is photovoltaic solar energy?

Photovoltaic solar energy is based on the photoelectric effect, in which some materials are able to absorb luminous particles and release electrons. The capture of solar radiation takes place by photovoltaic panels that are made up of smaller structures, called photovoltaic cells.

Can a PV cell convert artificial light into electricity?

Some PV cells can convert artificial light into electricity. Sunlight is composed of photons, or particles of solar energy. These photons contain varying amounts of energy that correspond to the different wavelengths of the solar spectrum. A PV cell is made of semiconductor material.

What is photovoltaic conversion?

The process of directly converting sunlight into electricity without using a heat engine is known as photovoltaic conversion. The fundamental benefit of photovoltaic devices is that they are made as standalone systems, allowing them to provide outputs ranging from microwatts to megawatts.

Solar energy is one of the comparable candidates. Solar energy is a very, inexhaustible source of energy. The power from the sun intercepted by the earth is approximately  $1.8 \times 10^{11}$  MW which ...

Key learnings: Solar Cell Definition: A solar cell (also known as a photovoltaic cell) is an electrical device that transforms light energy directly into electrical energy using the photovoltaic effect. Working Principle: The working ...
