

Will Tunisia be able to generate 30% of its electricity by 2030?

Tunisia has a target of generating 30% of its electricity from renewable energy sources by 2030. The south of the country, where our Adam and Tataouine power plants are located, is an ideal area for solar power generation.

What is a photovoltaic power plant in Tunisia?

In Tataouine, in the governorate of Tunisia that goes by the same name, a photovoltaic power plant is in operation that can reach a maximum installed capacity of 10 MW to supply more than 20 GWh of energy per year to the national grid. The plant is equipped with a solar tracking system that optimises the energy that is produced.

Is Tunisia a good place to invest in solar energy?

Tunisia's climate presents a key solar energy opportunity and, together with an improved investment framework and a highly skilled workforce, the country should be well positioned to support its ambitious Plan Solaire Tunisien. However, to date, Tunisia has fallen short of its intermediate solar PV targets.

What percentage of Tunisia's electricity is renewable?

In 2022, only 3% of Tunisia's electricity is generated from renewables, including hydroelectric, solar, and wind energy. While STEG continues to resist private investment in the sector, Parliament's 2015 energy law encourages IPPs in renewable energy technologies.

Where is the first large scale solar power plant in Tunisia?

The first large scale solar power plant of a 10MW capacity, co-financed by KfW and NIF (Neighbourhood Investment Facility) and implemented by STEG, is in Tozeur. TuNur CSP project is Tunisia's most ambitious renewable energy project yet.

What are Tunisia's energy projects?

One third of the projects will be for wind farms and two thirds for solar photovoltaics. Tunisia's national grid is connected to those of Algeria and Libya which together helped supply about 12% of Tunisia's power consumption in the first half of 2023.

STEG Manager Sayari mentions some key data, including plans to generate 30 per cent of Tunisia's power by 2030 using renewable energy sources, primarily solar and wind power. Only 400 megawatts are currently produced with renewables: 250 megawatts from wind, 70 megawatts from photovoltaic roof panels, 20 megawatts from Tozeur and 60 megawatts ...

STEG Manager Sayari mentions some key data, including plans to generate 30 per cent of Tunisia's power by 2030 using renewable energy sources, primarily solar and wind power. Only 400 megawatts are currently ...

Tunisia has a target of generating 30% of its electricity from renewable energy sources by 2030. The south of the country, where our Adam and Tataouine power plants are located, is an ideal area for solar power generation.

average of over 3,000 hours of sunlight annually, Tunisia is ideally positioned to harness solar power to meet its energy demands sustainably. The importance of solar energy in Tunisia lies in its ability to address energy security, promote economic development, and combat climate change. Solar energy also contributes to Tunisia's

With this report we are proud to present our findings on solar investment opportunities in Tunisia. The report provides a snapshot of Tunisia's business environment, major macroeconomic trends, and analyses issues related to the country's credit and political risk.

Tunisia's climate presents a key solar energy opportunity and, together with an improved investment framework and a highly skilled workforce, the country should be well positioned support its ambitious Plan Solaire Tunisien. However, to date, Tunisia has fallen short of its intermediate solar PV targets.

The solar plant is being implemented by Kairouan Solar Plant, a project company registered in Tunisia and fully owned by AMEA Power, and will be located in Metbassta, Kairouan governorate. The project is being financed by IFC, a member of the World Bank Group, and the African Development Bank (AfDB).

This landmark project will be the first large-scale privately financed grid-connected solar independent power producer in the country and will support the government of Tunisia's goal to increase the share of renewable energy in its energy mix to 35% by 2030.

The solar plant is being implemented by Kairouan Solar Plant, a project company registered in Tunisia and fully owned by AMEA Power, and will be located in Metbassta, Kairouan governorate. The project is being financed ...

Solar Energy in Tunisia. Tunisia has good renewable energy potential, especially solar and wind, which the government is trying to tap to ensure a safe energy future. The country has very good solar radiation potential which ranges from 1800 kWh/m²; per year in the North to 2600kWh/m²; per year in the South.

This landmark project will be the first large-scale privately financed grid-connected solar independent power producer in the country and will support the government of Tunisia's goal to increase the share of renewable ...

SolarPower Europe, supported by the Global Solar Council and the Chambre Syndicale du Photovoltaïque (CSPV) of Tunisia, publishes the second edition of its report on solar investment opportunities in Tunisia.
