

Why should you choose a Volvo Penta Bess subsystem?

Volvo Penta's BESS subsystems provide you with an energy-dense solution with an advantageous C-rate. This helps ensure efficient energy storage with rapid charge and discharge capabilities, which is ideal for applications where energy reliability and swift power delivery are crucial.

Why is Volvo launching a Bess solution?

The company said the launch of a BESS solution is a strategic move to supplement its power generation business and tap into a new segment. A spokesperson for Volvo Group told Energy-Storage.news that the product is a sub-system rather than a full containerised solution.

Why should you choose Volvo Penta?

The Volvo Group's investments in battery cell and pack manufacturing around the world is aimed at securing capacity and large-scale series production. Dependable, transportable performance - even in the most demanding environments. Volvo Penta's BESS subsystems provide you with an energy-dense solution with an advantageous C-rate.

The next phases of this project include testing and commissioning the BESS system, finalizing the Light Fuel Oil ("LFO") commissioning, continuing the Liquefied Petroleum Gas ("LPG") interconnection activities, and performing the final commissioning of the plant.

A render of the firm's BESS solution. Image: Volvo Penta. The power solutions arm of manufacturing firm Volvo Group has expanded into the battery energy storage system (BESS) market, launching a sub-system product initially in the US and Europe.

6 ???&#0183; With an energy-dense design ideal for mobile applications, Volvo Penta's containerized BESS is perfectly suited for no-emission zones or remote locations where electric machinery requires charging. The BESS can be transported to the site to power operations from large festivals to disaster relief.

By storing excess energy and releasing it when needed, the BESS helps to stabilize the grid, reduce energy costs, and minimize the likelihood of outages. "Today marks a new chapter for WAPA as we bring forward the Battery Energy Storage System, a game-changer for our energy landscape," said CEO/Executive Director Karl Knight for the Virgin ...

Volvo Penta provides power solutions to a range of industries, notably engines and other power components to marine, mining, construction, power generation and also large EVs. Its BESS solution uses the battery ...

These Volvo Penta powered BESS can integrate with renewables or other power generation assets, to provide more stable and reliable energy essential for large-scale or remote operations transitioning to electrification.

Volvo Penta provides power solutions to a range of industries, notably engines and other power components to marine, mining, construction, power generation and also large EVs. Its BESS solution uses the battery technology it has developed in-house for those solutions.

Volvo Penta's energy-dense BESS subsystems are purpose-built to enable OEMs to build transportable, high-performance BESS solutions supporting the energy transition in industries where energy density is essential.

Both LS Energy Solutions and Volvo Penta are setting benchmarks for innovation in BESS technology. Companies developing tailored energy solutions drive cost savings and operational reliability and contribute to the global energy transition.

By storing excess energy and releasing it when needed, the BESS helps to stabilize the grid, reduce energy costs, and minimize the likelihood of outages. "Today marks a new chapter for ...
