

Uruguay the energy storage revolution action 11

Does Uruguay have a renewable power grid?

Well, the South American country of Uruguay has successfully done it. In an average year, 98% of the energy used to run its power grid comes from renewable sources - hydropower, biomass, solar and lots of wind. Erika Beras from the Planet Money team interviews the architect of the plan that made this possible.

Does Uruguay have a wind power auction?

In 2009, Uruguay started holding auctions in which different wind companies from around the world came to bid on how cheaply they'd sell renewable energy to the country. In 2011, Uruguay held an auction intended to secure 150 megawatts of new wind power, which would have represented about 5% of the country's energy generating capacity.

Should Uruguay switch to green electricity?

Uruguay, one of South America's smallest countries, is attracting outsized attention over its transition to green electricity. It didn't happen simply by building a bunch of wind and solar farms, the architect of the strategy said, but by rethinking the entire energy system. And, he said, other countries could do that too.

Does Uruguay have a problem with wind energy?

In other countries, there have been problems with quality, with accountability, with corruption. The wind project in Uruguay didn't suffer from those, but it does have some critics. In the last 12 years, the price for wind energy has gone down. It's now 30 to 40% cheaper than it was then.

Uruguay. Action Plan for Power Sector Decarbonization: Planning. NDCs and Uruguay's Long -Term Climate Strategy are the reference frameworks for actions that contribute to the decarbonization of the economy from the energy sector. In 2017, Uruguay presented its first nationally determined contribution (NDC) with 20 targets for reducing emissions

Over the course of about a decade, Uruguay, under the stewardship of Galain, installed about 50 windfarms across the country, decarbonised the grid and bolstered its hydropower. The biggest challenge, however, was to change the "narrative" about renewables.

RENEWABLE ENERGY REVOLUTION IN URUGUAY In 2019 the 98% of energy consumption of Uruguay was derived from renewable sources. In particular, the new diverse energy mix of the country is actually provided by hydropower for a 55,6%, wind energy for a 33,6%, biomass 6%, solar power for a 2,8% and thermal energy for a 2%.

From the energy point of view, Uruguay lacks gas, oil, and coal reserves, but is rich in domestic natural resources suitable for a clean energy transition. Political shift and energy policy - how Uruguay has pushed its

...

The country tends to produce a surplus of renewable energy, which allows it to export green electricity elsewhere. In 2021, Uruguay generated 14.04 TW of electricity (a 20% increase from 2020), 1119 TW for internal demand and exported 2,200 MW to Brazil plus 627 MW to Argentina, according to US International Trade Administration data.

In five years, Uruguay transformed its grid. Now 98% of its energy comes from renewables. Former national director of energy, Ramón Méndez Galain, recounts his country's path and how to ...

Uruguay, as a country heavily reliant on foreign oil, found itself in an energy crisis. With a population of 3.4 million, the surge in energy demand surged by 8.4 percent in the preceding year. As a result, household energy expenses skyrocketed, putting a strain on individuals' wallets and increasing anger among the populace.

Over a decade, Uruguay installed 50 wind farms across the country, decarbonized its energy grid and bolstered its hydropower. The biggest challenge, Galain says, was changing the "narrative ...

In a typical year, 98% of Uruguay's grid is powered by green energy. How did it get there? It involved a scientist, an innovative approach to infrastructure funding, and a whole lot of wind.

The Wind Energy Program, co-founded by the Global Environment Facility, supported the Government of Uruguay in creating an ambitious national policy on renewable energy. This included crafting a competitive bidding mechanism for large-scale renewable energy development and a fed-in tariff for smaller-scale systems,
