Can a Blu-ray Disc help solar cells absorb sunlight?

The Northwestern researchers have demonstrated that a Blu-ray disc's strings of binary code 0s and 1s, embedded as islands and pits to store video information, give solar cells the near-optimal surface texture to improve their absorption over the broad spectrum of sunlight.

Can discarded CDs be turned into solar panels?

In recent days, a video has gained viral traction across social media platforms, captivating viewers with an innovative idea: transforming discarded CDs into functional solar panels.

Can you create a solar panel using CDS?

CDs are becoming obsolete, these shiny discs have potential. Here we unveil a captivating journey into creating a solar panel using CDs. Embrace the DIY spirit and generate your electricity with a touch of ingenuity. Make sure you have lots of disks and then read the article.

Could a Blu-ray Disc be on a solar panel?

After all, solar panels must also trap light as it comes in. Maybe by replicating the microscopic, glassy wonderland of the surface of a Blu-ray disc onto a solar panel, the engineers could up a solar panel's performance. This isn't as weird of an idea as it seems at first blush.

Could old Blu-ray movie discs make solar cells more efficient?

As it turns out, old Blu-ray movie discs can be turned into something other than just colorful drink coasters: their semi-reflective surfaces may be the key to making more efficient solar cells. This discovery was made by engineers from Northwestern University and published in the journal Nature.

Can you make a photovoltaic array from old compact discs?

Spoiler: Of Course Not! You may see videos go viral, with tens of millions of views, that apparently show people creating photovoltaic arrays by wiring coils around grids of old compact discs (or even just adhering aluminum foil strips across them). Hey, they look all shiny metallic and solar-y, so they should be able to generate power, right?
