

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided

continued to lead the share of the energy mix in 2021, similarly to past years. Diesel generation contributed 79.3 %, followed by hydro contributions of 11.1 %, wind contributed 5.5% and Solar 4.1%. Solar energy contributions include the Government Solar Farms at both Meteo Complex and Parliament House Complex

The Government of Vanuatu through the Ministry of Climate Change are taking concrete actions to mitigate climate change by promoting the use of Renewable Energy (RE) and Energy Efficiency (EE) technologies. These will help contribute to achieving sustainable energy, energy access, energy savings and greenhouse gas reduction.

The updated NERM acts as the national energy policy. Since it was launched, Vanuatu's economy and energy sector have continued to develop. External events, such as Cyclone Pam in early-2015, have also shaped how energy sector policies and priorities are conceived. The purpose of this document is to update the NERM to reflect recent developments.

Vanuatu: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.
