

Warehouse storage of lithium ion batteries The Netherlands

Are lithium-ion batteries safe in the Netherlands?

Therefore, an extensive set of laws and guidelines has been developed in the Netherlands to ensure the safe production, storage, transport, and use of lithium-ion batteries. The PGS 37 guideline is specifically aimed at the storage of lithium-ion batteries in the Netherlands. This guideline contains detailed regulations for:

How far can a lithium ion battery be stored?

Article 4.1 of the Activities Decree does apply. This means that a safety distance of 20 meters applies for storage of more than 2,500 kg. This distance can be reduced to 8 meters if storage takes place in a fire compartment. The exception of paragraph 4 does not apply because lithium-ion batteries are flammable hazardous substances.

What is the new guideline for the storage of lithium-ion drive batteries?

In November 2023, the new guideline for the storage of lithium-ion drive batteries was published. This PGS 37-2 (Publication Series for Hazardous Substances) outlines principles for the safe storage of batteries. The National Waste Management Plan LAP3 outlines how various waste materials should be managed in the Netherlands.

Where can I store Unused lithium-ion batteries?

We specialise in providing temperature-controlled storage for new, unused lithium-ion batteries within our dedicated warehouse facilities, strategically located in the West Midlands. Equipped with cutting-edge technology, our facilities ensure optimal conditions for your batteries.

Does the Bevi apply when storing lithium-ion batteries?

Yes, when storing lithium-ion batteries in quantities of more than 10,000 kg in a storage facility, the Bevi usually applies. The Bevi uses a different definition of hazardous substance than the Activities Decree and the BOR, which is not based on the ADR.

Are batteries a barrier to energy storage in the Netherlands?

Under the Electricity Act 1998, generation is exempt from the payment of transmission costs, but consumption is not. This highlights one of the main barriers to energy storage in the Netherlands, as batteries currently pay more transmission costs than polluting wholesale consumers.

Lithium-ion batteries are essential in many modern technologies, but they also pose significant safety risks, such as fire and explosion. Therefore, an extensive set of laws and guidelines has been developed in the Netherlands to ensure the safe production, storage, transport, and use of lithium-ion batteries.

With fire protection from both outside and inside, active smoke gas management, pressure relief and a comprehensive alarm system, the ION-LINE ULTRA fire safety storage cabinet from Asecos is the way for warehousing professionals to safely store lithium-ion batteries.

Is (temporary) storage of lithium-ion batteries subject to a permit? Storage of lithium-ion batteries are subject to a permit in case more than 10,000 kg of lithium-ion batteries are stored. The storage of more than 10,000 kg often falls under the Bevi (see above).

In November 2023, the new guideline for the storage of lithium-ion drive batteries was published. This PGS 37-2 (Publication Series for Hazardous Substances) outlines principles for the safe storage of batteries.

Warehouse Netherlands is a fully independent Dutch warehousing intermediary who helps you to quickly find suitable warehouse space in the Netherlands via a vetted network of Dutch warehousing, storage, and European fulfillment companies.

The rules for storing devices with lithium-ion batteries are becoming much stricter. A warehouse with electric bicycles, cell phones or other devices with batteries, for example, must invest heavily in fire protection in the coming year because of the new directive PGS 37-2.

Do you ever really think about the risks of storing and charging your lithium-ion batteries? According to Henk Niewenhuis, director of Asecos, it is incredibly important for companies to think about this. "It's not just about the storage facility, ...

Lithium-ion batteries are essential in many modern technologies, but they also pose significant safety risks, such as fire and explosion. Therefore, an extensive set of laws and guidelines has ...

The following article provides an overview of the legislative framework in respect of battery storage in the Netherlands and explores the issues that should be taken into account when considering investing in energy storage in the Netherlands.

In the dynamic realm of renewable energy, lithium-ion battery energy storage systems have emerged as pivotal for effectively harnessing surplus energy from solar parks and wind turbines.
