Is energy storage a viable option for utility-scale solar energy systems?

Energy storage has become an increasingly common component of utility-scale solar energy systems in the United States. Much of NREL's analysis for this market segment focuses on the grid impacts of solar-plus-storage systems, though costs and benefits are also frequently considered.

What are the business models for solar PV installation?

The business models are concentrated around the way rooftops are being utilized for solar PV installation. Accordingly four business models could be discovered in the markets which are explained through the following diagrams. 1.1.1. Solar Roof Rental Model 1.1.2. Solar PPA Model 1.1.3. Solar Leasing Model 1.1.4. Solar Co-operatives Model

Are low-valued PV systems viable business models?

This suggests that business models built around these lower-valued PV system attributes may not be viable, unless they can also take advantage of the other more lucrative value streams. In this business model, the customer or a third party controls the PV system as well as owns it.

How has the solar PV industry evolved in recent years?

The evolution of the solar PV industry so far has been remarkable, with several milestones achieved in recent years in terms of installations (including off-grid), cost reductions and technological advancements, as well as establishment of key solar energy associations (Figure 5).

Could solar power be a part of a technology package?

PV could become part of a technology package offered to end-users by third parties, such as energy service companies. PV could be integrated with energy efficiency performance contracting, energy procurement (in restructured markets), and building energy management services, including backup generation.

How does solar-plus-storage affect energy systems?

Solar-plus-storage shifts some of the solar system's output to evening and night hours and provides other grid benefits. NREL employs a variety of analysis approaches to understand the factors that influence solar-plus-storage deployment and how solar-plus-storage will affect energy systems.
