What is a home solar system?

A home solar system, also known as residential solar, is a system that converts sunlight into usable energy for residential properties. It comprises solar panels, inverter(s), and a battery (optional) and is also connected to the main power grid. Solar panels are the heart of a home solar system and function by absorbing available sunlight.

What is solar energy?

Solar energy is energy from the sun that we capture with various technologies, including solar panels. There are two main types of solar energy: photovoltaic and thermal. The "photovoltaic effect" is the mechanism by which solar panels harness the sun's energy to generate electricity. Want to take advantage of solar energy yourself?

Where is solar energy used?

It is used primarily in very large power plants. Solar energy technology doesn't end with electricity generation by PV or CSP systems. These solar energy systems must be integrated into homes, businesses, and existing electrical grids with varying mixtures of traditional and other renewable energy sources.

What is a residential solar system?

Most residential solar systems are designed to supplement your home's energy needs. This approach reduces your reliance on traditional energy sources while maintaining a reliable power supply.

Should you choose solar energy for your home?

Before starting the process of powering your home with solar energy, homeowners should investigate their energy use and consider potential efficiency upgrades. Homeowners should be well aware of their total electricity usage, and consider low-cost and easy-to-implement efficiency measures before choosing solar.
