

# What should I do if the photovoltaic inverter displays a white screen

How to maintain a faulty solar inverter display?

To maintain a faulty solar inverter display, you can proceed with the following steps: Begin with turning off the input PV switch on the photovoltaic inverter side. Next, disconnect the PV input DC switch and finally, switch off the battery switch.

What is a solar inverter display?

A solar inverter display typically shows information about the current power output, total energy production, and any system errors or issues. Users can read this display by first identifying the various symbols and numbers, which represent different metrics of the solar system's performance.

How do I know if my inverter is producing power?

For more information regarding your system's production and communication, please follow the steps below. Please note: The system doesn't produce at night time. Look for the green LED: when it is on, the system is producing power, if it is flashing, this means the inverter has AC power and is in Standby mode.

How do I read a solar inverter screen?

In order to read a solar inverter screen, you will need to know what all of the different symbols and numbers mean. The first thing you will see on the screen is a symbol that looks like a sun with rays coming off of it. This sun symbol is called the power flow indicator and it shows you whether your system is producing energy or not.

Why should a solar inverter be inspected regularly?

Regular inspection is essential to avoid potential malfunctions that could affect the performance of inverter. Solar energy is a sustainable power source, with inverters converting sunlight into electricity. These devices are crucial components of a power system, but they can encounter issues from time to time.

What happens to my solar inverter after dark?

Note: After dark, your solar inverter automatically switches to Night Mode-- the lights will be off, and the screen will be blank. When the sun rises, your solar inverter will return to normal.

If the inverter screen is blank or isn't displaying any light, the first thing you can do is to reboot or restart it. Sometimes rebooting your solar power system may not resolve the problems with your solar inverter.
