

Source: BloombergNEF. Note: Required spread for a two-hour battery project assuming revenues cover project costs of EUR360,000/MWh in 2024, for previous years assumes BNEF's Europe energy storage system costs. Assumes 90% ...

New Energy Outlook 2024: Grids. You must login to view this content. Login Power grids need three things in the coming decades to keep up with the energy transition: money, wires and digital tech. More than \$20 trillion flows into the world's grids between now and 2050 in BloombergNEF's Net Zero Scenario - or 70% of all...

That target aligns with BNEF's analysis on what is needed to get on track for net zero. Cleaner power generation can drive much-needed emission cuts this decade, buying time for "hard-to-abate" sectors like steelmaking and aviation, for which decarbonization solutions are still emerging. ... The Energy Transition Factbook 2024 was ...

At the COP28 UN Climate Change Conference in December, governments agreed to work together to triple the world's installed renewable energy capacity by 2030. Renewables 2024 offers a comprehensive country-level analysis on tracking progress towards the global tripling target based on current policies and market developments.

The New Energy Outlook presents BloombergNEF's long-term energy and climate scenarios for the transition to a low-carbon economy. Anchored in real-world sector and country transitions, ...

At the COP28 UN Climate Change Conference in December, governments agreed to work together to triple the world's installed renewable energy capacity by 2030. Renewables 2024 offers a comprehensive country-level analysis on ...

The global energy storage market is set for another record year. BloombergNEF expects 69GW/169GWh of additions in 2024, up 76% in gigawatt-hours from 2023. China continues to lead installations thanks to provincial co-location mandates, but a slight...

BNEF has enhanced its modeling for the 2024 edition of the New Energy Outlook. The analysis now includes detailed modeling results for 12 countries and nine regions for both scenarios, and shows that:

BNEF New Energy Outlook gives a long-term scenario analysis on the future of the energy economy. ... wind and electric vehicles as well as the development of new technologies such as clean hydrogen and carbon capture ...

Deployment in China is the largest uncertainty to this outlook. The market is difficult to predict as projects are not announced well in advance and deployment is driven by policy targets, which are still lacking for 2030. Supply in China is based on BNEF's view on market adoption and assumptions around a replacement rate for gray H2.

As reported by Energy Storage News, analysis firm EnergyTrend has forecast that a "surge" in global large-scale energy storage system deployments is likely in 2024. Looking ahead in 2024, TrendForce anticipates the global energy storage installed capacity to reach 71GW/167GWh, marking a 36% and 43% year-on-year increase, respectively, and ...

As reported by Energy Storage News, analysis firm EnergyTrend has forecast that a "surge" in global large-scale energy storage system deployments is likely in 2024. Looking ahead in 2024, TrendForce anticipates ...

Weather is a crucial factor driving the change in LNG demand, as are prices. The outlook for Asia's benchmark Japan-Korea Marker and Europe's Title Transfer Facility is slightly bullish for the start of winter in BNEF's base-case scenario, due ...

New Energy Outlook 2024: Executive Summary May 21, 2024 ... BNEF sees carbon neutrality by mid-century as a tough but achievable stretch. ... capture and storage (CCS), hydrogen and bioenergy, which are allocated to their respective categories. "Energy efficiency" includes

At BloombergNEF's 2024 New York Climate Week event, we heard from industry leaders, policymakers, financiers, and innovative thinkers on strategies to mobilize capital and accelerate the transition to net-zero. BNEF experts presented research insights focused on scaling renewables, zero emission commercial vehicles, and our New Energy Outlook ...

Battery overproduction and overcapacity will shape market dynamics of the energy storage sector in 2024, pressuring prices and providing headwinds for stationary energy storage deployments. This report highlights ...
